

Toxics Reduction Act Public Annual Report - Calendar 2015

The legal and trade names of the owner and the operator of the facility, the street address of the facility and, if the mailing address of the facility is different from the street address, the mailing address. (See below)

Tembec Cochrane Sawmill
70 - 17th Avenue
P.O. Box 1059
Cochrane ON
P0L 1C0

Facility NPRI identification number

11068

The identification number assigned to the facility by the Ministry of the Environment for the purposes of Ontario Regulation 127/01.

5591

Number of full-time employees

121

North American Industry Classification System (NAICS) - 2, 4, and 6 digit codes

31-33 - Manufacturing
3211 - Sawmills & Wood Preservation
321111 - Sawmills

If applicable, the name, position and telephone number of the individual who is the contact at the facility for the public:

Public Contact (if applicable)

Linda Coates

Title

Annual Progress Report

Substances for which toxic substance reduction plans have been prepared:

Substance:	CASRN
alpha-Pinene	80-56-8
beta-Pinene	127-91-3
beta-Phellandrene	555-10-2
Ethyl Alcohol	64-17-5
Methanol	67-56-1
Particulate Matter equal to or less than 10 microns (PM ₁₀)	NA-M09
Particulate Matter less than 2.5 microns (PM _{2.5})	NA-M10

Plan Objectives

Tembec's goal is to reduce the creation of alpha-pinene, beta-pinene, beta-phellandrene, Ethyl Alcohol, Methanol, PM₁₀, and PM_{2.5} where technically and economically feasible by the timetable noted in the plan. We will achieve these reductions through procedure improvements and employee education and training. It is important to note that methanol and its precursors are naturally in the wood materials used by the facility and that most current research seeks to abate methanol and VOC emissions using end of pipe controls. No technically or economically feasible reduction options were identified for PM₁₀ or PM_{2.5}.

Toxics Reduction Progress

Increases in all reported substances were observed in all reporting categories. These increases are directly related to an overall increase in the annual production in 2015 relative to 2014. However, with the exception of PM10, these increases fall within the accepted range of being "insignificant" which Environment Canada deems to be variations in reported quantities of less than 10%. In the case of PM10, the larger variation is due to changes in the quantity of road dust created and released which utilized historical weather data specific to 2015 from the nearest Environment Canada weather station. This resulted in a decrease in the natural mitigation inputs used as part of the road dust calculations from 275 days to 259 days which in turn resulted in an increase in the calculated emissions.

Plan Implementation Progress

Steps taken during the reporting period were those outlined in the plans for these substances pending the completion of a technical evaluation of the reduction options noted. There were no deviations from or amendments made to the plan in the reporting period. The timetable outlined in the plan will be met.

As of May 28, 2016, I certify that I have read the reports on the toxic substance reduction plan for alpha-Pinene, beta-Pinene, beta-phellandrene, Ethyl Alcohol, Methanol, PM₁₀, and PM_{2.5} and am familiar with its contents and to my knowledge the information contained in the report is factually accurate and the report complies with the Toxics Reduction Act, 2009 and Ontario Regulation 455/09 (General) made under the Act.
